

What Are Digital Alerts from HAAS Alert?

07/21/2025 7:48 pm CDT

Digital alerts are real-time, location-based notifications sent to drivers through apps like **Waze**, **Apple Maps**, and compatible in-dash vehicle systems (e.g., Uconnect, Car-Net).

These alerts are triggered when a **HAAS Alert-equipped emergency vehicle or work zone asset** activates its warning system — such as lights, sirens, or digital beacons.

Digital alerts notify drivers in advance of upcoming hazards, such as:

- Emergency response vehicles ahead
- Roadside crews or tow trucks
- Active work zones
- Lane closures or stopped vehicles

By giving drivers more time to react, digital alerts help **reduce collisions**, **improve move-over compliance**, and make roads safer for everyone.
